	Per Day		Per year	
	<i>Uncompressed</i>	<i>Compressed</i>	<i>Uncompressed</i>	<i>Compressed</i>
Set Meter	2 MB	.4 MB	730 MB	146 MB
LPM	25 MB	4 MB	9 GB	1.5 GB
All Market	700 MB	101 MB	222 GB	36 GB

Below are some important details regarding the use of Windows compression:

- Compression can only be applied if the data is stored on an NTFS file system.
- Compression should be enabled during install, before any data is downloaded.
- When scheduling your installation, we will walk you through applying compression to your data folders.

Arianna also includes a caching feature that can substantially increase performance of analyses by copying data from your network to the user's local PC. Compression can also be applied to these cache directories, thus reducing the amount of space needed by this feature. Upon installation, we will walk you through compressing the cache directories on your individual user PCs, should you choose to use this feature.

- Additional Installs:** The Arianna install will also include the installation of the following components on the machine that will be downloading the daily overnight data.
 - Tumbleweed Secure FTP client
 - .NET v1.1.4322 Runtime Environment
